

CASLITE[®]
RUBBER INDUSTRIAL PRODUCTS

100%
RECYCLABLE

CÁSTER[®]

RESPECT FOR THE ENVIRONMENT

During the entire production process, any wastage of our rubber is reused in our formulation again. From the moment any dust is created in the production process, it is collected and put once more on the next formulation.

Likewise, the skeletons left over when the outsoles are cut from our sheets are collected and converted again in dust, which is then reutilized.

CASTER'S RECYCLING PROCESS

ENVIRONMENTALLY RESPONSIBLE

For years already Caster has been environmentally responsible as we work towards the elimination of any pollution.

Using water based paintings, cutting back fuel usage, recycling our own left overs at every stage of our production process and our customer's production process, thus eliminating any harm by wastage. In Caster we follow the conservation of natural resources and remove hazardous substances as stated by the EU Legislative REACH Regulation for the shoe industry.

This makes Caster your sustainable supplier of soling sheets.
